

Trouble Shooting

Possible Problems

Here are some common problems and possible solutions

1. Not detecting an IP address.

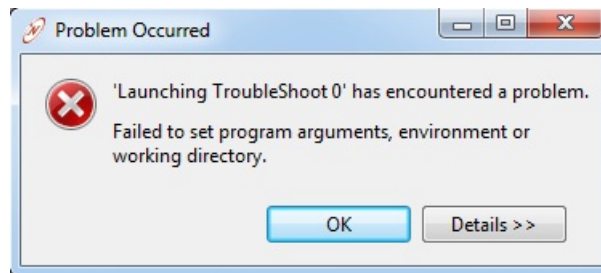

Check to make sure the red cable is plugged in properly and give it a hardware reset(Blue button on the Netburner board)

2. Workspace

Please make sure to import your project back to the Netburner Workspace and work from that directory.

3. Debugger Session won't launch

Make sure all project names do not have a space or special character in it

4. Project won't compile

If you have strings in your code, try adding one or two spaces at the end of each string.
